

SHARE THE LOVE. SHARE THE WI-FI.

Wi-Fi services are vulnerable to excessive wireless interference, which may degrade the ability of exhibitors to demonstrate their products, prevent sales reps from placing orders and block keynote addresses from being live streamed, among other important convention activities.

One user, one channel.

Use only one Wi-Fi channel at a time. This benefits the entire wireless community at the Convention Center.

Don't combine or bond multiple channels.

Doing so will significantly degrade service for all of your fellow attendees and exhibitors.

Smart City has got you covered.

Contact our on-site technology provider to discuss your wireless options.

Don't bring in cellular devices that create wireless networks. These devices create interference for others in the exhibit hall.

Share the love! Share the wireless bandwidth by turning off your personal hotspot on your cell phone, wireless camera, gaming device and other portable wireless devices.

Don't actively scan our wireless network, use peer-to-peer traffic apps or torrent downloader software tools like BitTorrent. Doing so consumes a disproportionately large amount of bandwidth and wireless network resources.

The San Diego Convention Center's technology infrastructure includes one of the most comprehensive wireless networks in the country. Contact Smart City, our on-site partner, to obtain the right wireless solution for your needs.
